Recommend to Your Patients the Most Unique,
Non-Hormonal Contraceptive on the Market Today

VCF[®]

Vaginal Contraceptive Film[®]

VCF is the # 1 over the counter Female Contraceptive
Now available to you at through TACHC 340Better

In today's climate of increasing concern over potential side effects, a non-hormonal spermicide could make more sense for many of our patients than ever before. VCF Vaginal Contraceptive Film is the spermicidal contraceptive that women prefer most. Because VCF delivers its active ingredient with so few inactive ingredients, it is virtually undetectable by either partner, thus putting the women firmly in control. It is a fact that when used properly, spermicides are extremely effective. With VCF, there are few unwanted side effects other than the occasional minor vaginal irritation. VCF is easy to use. It dissolves almost immediately with nothing to remove. VCF kills sperm for up to 3 hours after insertion. Its film-formulation has been the subject of over 30 clinicals conducted worldwide over the past 25 years. Even though VCF Contraceptive Film is available without prescription in over 24,000 drug stores, it is professionally recommended to the OB/GYN and nurse practitioners for recommendation and use.
